Filter by

-  Average Dwell Time
-  Average Peak Dwell Time
-  Average Low Dwell Time

Hopefully self explanatory

also hopefully self explanatory, kpi's at the top are provisional. I'm still thinking of good metrics that would be useful.

When should I staff?

Your current peak hours are

11am,12pm, and 6pm.

Based on past history your peak hour for today should be 5pm. Your low times for today will be

7am and 3pm.

Try to staff around these times for a better customer experience.
